

How to add a prebuilt so

1. Prebuilt so

Note: Prebuilt so should use the **same toolchain** with ROOTFS image.

2. Add so

- The PATH of .so can defined by user, often stored in src/apps/***/ customer folder.
- It should contain 3 items for each prebuilt so:
 - Include file(***.h)
 - So file(***.so)
 - LICENSE file(LICENSE)

3. Install so in recipes files.

```
Ex: /meta/meta-mediatek-aud/recipes-*/*/*/abc.bb
do_install() {
    Install -d ${D}/${libdir}
    Install -m 755 ${S}/libabc.so ${D}/${libdir}
}
```
